

# Update system and install NGINX + Git

```
sudo apt update -y && sudo apt install -y nginx git
```

# Start and enable NGINX

```
sudo systemctl start nginx && sudo systemctl enable nginx
```

# Clone your GitHub repo (replace URL and repo name)

```
cd ~
```

```
git clone https://github.com/<your-username>/<your-repo>.git
```

# Copy only index.html to NGINX root

```
sudo cp ~/<your-repo>/index.html /var/www/html/index.html
```

# Fix ownership so NGINX can read the file

```
sudo chown www-data:www-data /var/www/html/index.html
```

# Reload NGINX

```
sudo systemctl reload nginx
```
